

## Notice to Mariners – Current Meter Deployments

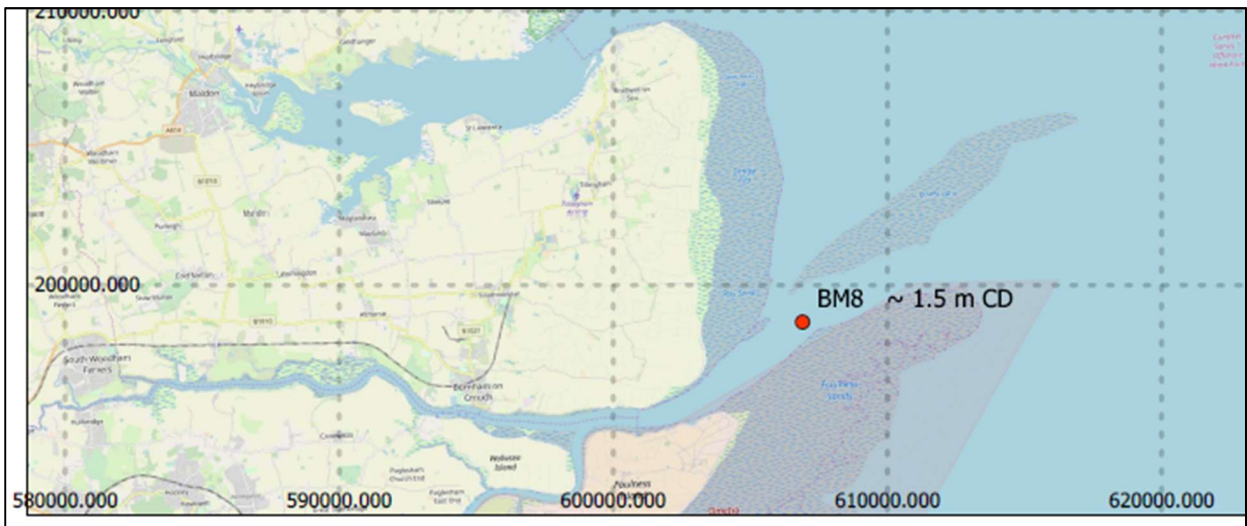

As part of the Anglian Water Coastal Modelling System Upgrade, Intertek has subcontracted Partrac Ltd to deploy ten seabed mounted acoustic monitoring devices around the East Anglian Coast. Weather permitting, these will be deployed during the period 19<sup>th</sup> to 24<sup>th</sup> of August 2019.

The devices will remain in the water for a period of 35 days. An update will be made to the Notice to Mariners prior to the device’s recovery or extension of this period.

This NTM pertains to one device being deployed in the approaches to the Crouch estuary, at the following location: -

Site	Easting	Northing	Lat	Long	Lat	Long	Depths (LAT)
BM8	606900	198650	51.6486	0.9893	51°38.916	00°59.358	7.0m

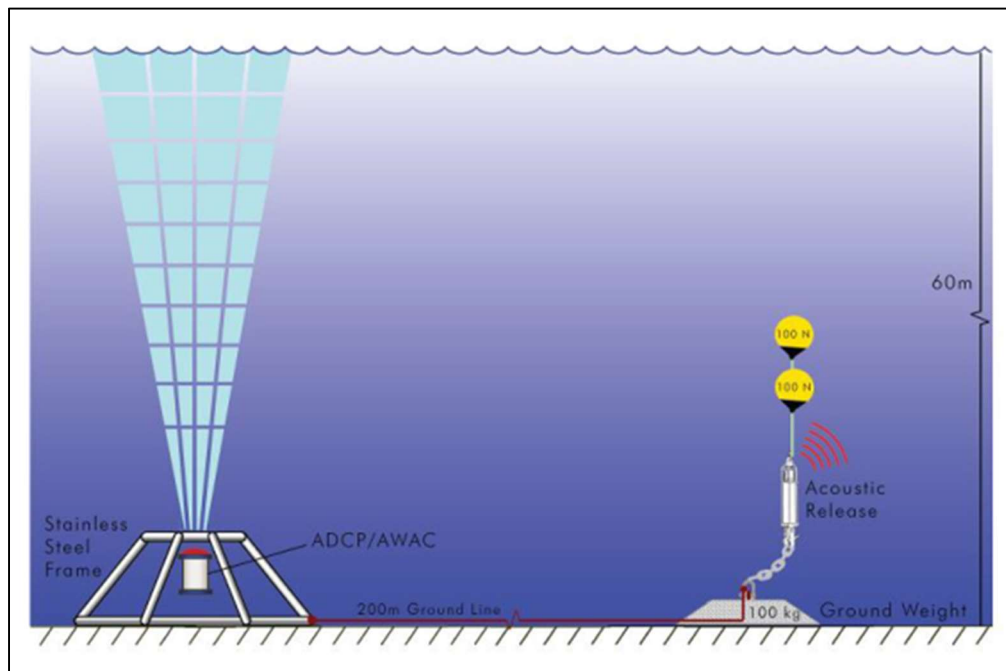

Positions are in WGS84.

The system is to be deployed utilising the vessel 'Punisher', owned and operated by Predator Charters.

The equipment is deployed with a standard J mooring design as represented in the following figure. A surface mark will also be used having a nav light flashing at 2.5 second intervals.

**Avoidance to a range of 500m of any operations or equipment is requested.**
